

SQL PROJECT ON PIZZA SALES ANALYSIS

EXPLORING PIZZA SALES DATA USING SQL

INTRODUCTION

Overview:

- **Introduction to the SQL project on pizza sales analysis.**
- **Brief description of the project's objectives and significance.**

Purpose:

- **To analyze pizza sales data using SQL queries.**
- **To gain insights into customer preferences, sales trends, and business strategies optimization.**

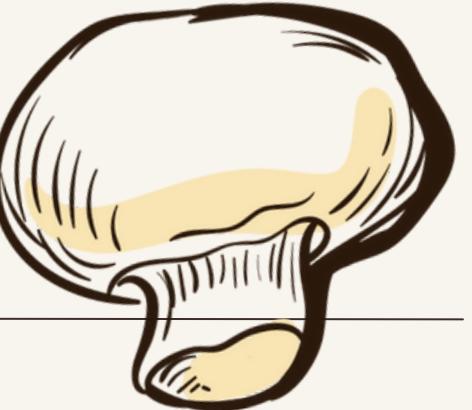

Objectives:

1. **Analyze sales data:** Extracting meaningful insights from the dataset to inform decision-making.
2. **Identify popular pizza types:** Determining which pizza types are most frequently ordered by customers.
3. **Explore customer preferences:** Analyzing toppings, sizes, and other factors to understand customer preferences.
4. **Identify sales trends:** Identifying patterns and trends in sales data to forecast future demand and optimize business operations.

DATA DESCRIPTION

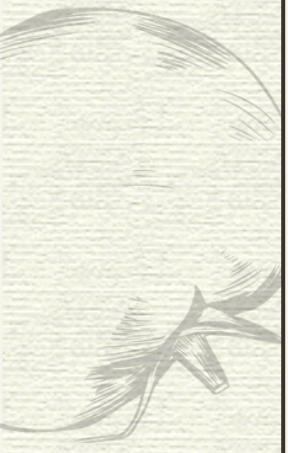

- The dataset used for this project contains records of pizza orders from a fictional pizza restaurant.
- The dataset includes columns such as Date, Pizza Type, Quantity , Price, and Customer Information.
- The dataset consists of 1000 entries, spanning a period of one year.
- Prior to analysis, the dataset underwent preprocessing steps to remove duplicate entries and handle missing values.

Retrieve the total number of orders placed.

```
SELECT COUNT(Order_Id) AS Total_Orders
